2019 Hazelnut Production Forecast Down Four Percent

Hazelnut production in Oregon is forecast to be 49,000 tons, according to the objective yield survey conducted by the USDA’s National Agricultural Statistics Service, Oregon Field Office. If realized, this would be a 4 percent decrease from last year’s record high hazelnut crop of 51,000 tons.

The percentage of good nuts analyzed in the laboratory came in at 89 percent. The average dry weight per good nut was 3.3 grams, up from 2.80 grams in 2018, a record low weight. Observed average nut size was 5.89, the largest since 2005. The number of nuts picked per tree was 201 this year, compared to 291 nuts picked last year. Large nuts (NASS laboratory sizes 4, 5, and 6) accounted for 35 percent of total good nuts. Jumbo nuts (NASS laboratory sizes 7 and 8) accounted for 49 percent of the total.

Hazelnut Production — Oregon: 2012-2018, and Forecasted 2019

Access to NASS Reports

For your convenience, you may access NASS reports and products the following ways:

- All reports are available electronically, at no cost, on the NASS web site <http://www.nass.usda.gov>
- Both national and state specific reports are available via a free e-mail subscription. To set-up this free subscription, visit <http://www.nass.usda.gov>. Hover over the "Publications" drop down. Under "Receive reports by Email" section in the lower right corner, select the report(s) you would like to receive.

For more information on NASS surveys and reports, call the NASS Agricultural Statistics Hotline at (800) 727-9540, 7:30 a.m. to 4:00 p.m. ET, or e-mail: nass@usda.gov
